SUMMARY

DevOps Engineer with 2+ years of experience building and operating Kubernetes platforms on AWS EKS, automating infrastructure with Terraform, and improving system observability with OpenTelemetry, Prometheus, and Grafana. Managed day-to-day Kubernetes cluster operations, troubleshooting, and root cause analysis (RCA), including routine updates and patching to keep clusters secure and stable. Skilled in CI/CD pipeline design and autoscaling. Seeking a DevOps / Platform Engineer role to drive infrastructure reliability and delivery velocity.

EXPERIENCE

*Cognizant Technology Solutions, **DevOps Engineer***

Sep 2024 - Jul 2026

- **Event-Driven Autoscaling:** Integrated KEDA for select high-traffic microservices on the production Kubernetes platform, enabling event-driven autoscaling based on real-time workload signals and replacing static HPA configs—brought down over-provisioned compute during off-peak hours by 35%.
- **Observability & Monitoring:** Deployed and configured the OpenTelemetry Collector and Agent across the Kubernetes cluster to centralize trace and metric collection. Built and maintained Grafana dashboards with alerting rules to support faster incident detection. Used K9s for real-time cluster debugging across 24 production nodes.
- **Infrastructure Automation:** Engineered reusable Terraform modules (VPC, EKS, EC2, S3, RDS) with remote state management, standardizing provisioning across 4 environments (dev, staging, UAT, prod). Proactively identified and remediated infrastructure drift across 85+ resources, ensuring infrastructure consistency and reliability.
- **Container Deployment:** Maintained and deployed Kubernetes Deployments, StatefulSets, and Services across the production cluster serving 32 microservices. Managed Ingress resources for application routing and used Helm to package and deploy releases consistently across environments.
- **Cluster Troubleshooting & RCA:** Identified and resolved pod failures across the production Kubernetes cluster, performing root cause analysis on issues such as CrashLoopBackOff, ImagePullBackOff, OOMKilled, and resource throttling — recurring incidents dropped by 45% as a result.
- **Docker Image Optimization:** Authored and maintained Dockerfiles for containerized applications, optimizing image size and build performance using lightweight base images such as Alpine and multi-stage builds — trimmed final image footprint by 55%, improving deployment speed.
- **Release Pipeline Support:** Contributed to a team-owned CI/CD pipeline using GitHub Actions for microservice deployments, working across stages including code checkout, automated testing, and image build/push to Amazon ECR.
- **Identity & Access Management:** Administered Azure Entra ID for the project environment — managing users, groups, external guest users, and bulk user operations across 12 teams to maintain access governance.

*Cognizant Technology Solutions, **DevOps Intern***

Jun 2024 - Sep 2024

- **Training & Residency:** Completed an intensive program focused on AWS Cloud Architecture, Kubernetes orchestration, and automated pipeline development. Gained hands-on exposure to core AWS services, with introductory experience in GCP and Azure — including Azure Entra ID for identity management fundamentals.

EDUCATION

Vellore Institute of Technology (VIT), Bhopal

*B.Tech • **Computer Science (Cybersecurity & Digital Forensics)***

CGPA: 8.33/10

LICENSES & CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon •

Microsoft Certified: AZ-900 (Azure Fundamentals)

Microsoft •

Microsoft Certified: SC-300 (Identity & Access)

Microsoft •

Microsoft AI-900 (Azure AI Fundamentals)

Microsoft •

SKILLS

AWS (EC2, S3, RDS, EKS, ECR, ALB, Lightsail, Lambda) • Azure (Entra ID, Monitor) • GCP (Introductory) • Terraform (Modular Design, Remote State, drift management) • Ansible • Kubernetes (Helm, KEDA, Ingress, HPA) • Docker • GitHub Actions • Jenkins • OpenTelemetry
